

Carving a dragon step-by-step

Michael Schaefer

2020

www.schwaebische-kettensaeger.de

The European
beech used
for the
dragon was
cut two years
ago as it was
sick.

Size of the
stump was
about 2mx1m
and 2m high.

1st step: try
to find the
head of the
dragon.

2nd step:
Left wing and
starting the
body.

3rd step: right wing

www.schwaebische-kettensaege.de

Step 4 and 5: drafting the tail and adding the bench.
The bench originates from a branch of the same tree.

Some final cuts at the
end... Done!
